\$99
Order Now!

The easiest, most affordable way to stream anything - movies, sports, websites or photos - from your laptop to your TV

Play Anything. Share Anything.

Veebeam lets you combine the amazing video and audio performance of your current HDTV with the never-ending entertainment options available on your existing laptop.

It lets you share all your digital content with your family and friends.

Looks Great

Your digital media will never look better than on your big HDTV. That's because Veebeam outputs 1080p.

Easy

When you're ready to watch a movie, plug the USB antenna into your laptop and stream anything directly to your TV. It's that simple.

Affordable

Starting at \$99, Veebeam lets you make the most of your big HDTV and that new high capacity laptop... without breaking the bank.

Plays Anything

If your PC can play it, Veebeam can send it on your TV. From TV shows and movies from popular streaming sites to downloaded video and personal photos.

Secure Wireless USB

Why use another wire to connect your TV and PC? De-clutter your home, cut the cables, and simplify your life by going wireless.

Easy to Use

There are two ways to use Veebeam: Desktop mode and Video Play-To mode. Selecting between Desktop and Play-To modes depends on what kind of content you want to watch on your TV.

Desktop Mode (default):

Use this mode to display your desktop or share websites with friends and family. This is the mode you will see when you first insert the USB antenna into your laptop.

Video Play-To Mode:

Use this mode to enjoy the best video quality when playing downloaded media files (not applicable to websites). The other big advantage of Video Play-To Mode is multi-tasking. When using Video Play-To Mode, you can stream to your TV while writing emails or surfing the web.
